

Introducing Fleetwork

your shipping software

our company

Fleetwork was created by the joint effort of a dedicated and talented team in order to provide this optimal, easy to use and cloud-based shipping management program.

We are constantly developing Fleetwork software tools and modules to offer solutions that will assist every customer in the challenging task of fleet management.

our values

Teamwork

We deliver outstanding products because we work together. Within a converged team, Fleetwork delivers effortlessly the tools for technical management in shipping.

Empathy

We respect our clients; we listen to their needs and act with empathy in order to deliver the right software solutions.

Independence

Our strong belief is that by allowing and encouraging our people to be creative and to “think outside the box”, the work that is produced continuously redefines quality across our product offering.

Growing Together

We offer our employees the opportunity and means to become experts and develop the necessary skills to grow in their career. Together we can furthermore enhance Fleetwork to become the optimal software solution in ship management.

the product

Fleetwork is a software specifically designed to make life and daily tasks easier regarding the managements of ships. In order to accomplish that, we have developed a number of modules and tools. Each one is targeting a specific section of fleet's needs (from maintenance to crewing) and provides solutions for a **successful and cost effective management.**

technical module

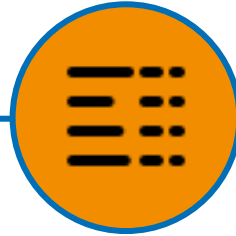

Maintenance module

This module helps check and control all the things needed for the optimal maintenance of ships and is also integrated with Purchase & Inventory modules.

Specifically:

- Manage centrally Assets and Equipment, ensuring better control of maintenance specifications and Fleet reporting and maintenance metrics.
- Embedded Defect Reporting System.
- Set up basic reporting templates for inspections and weekly maintenance reports for immediate use.
- Reuse PMS templates based on Fleet and Vessel templates.
- Use import tools to speed up the process of uploading Spares data to Fleetwork database and comparison metrics.
- Have a Certificates and Surveys tracking system.

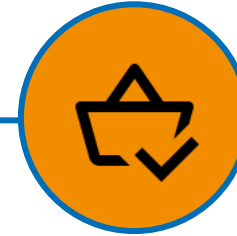

Inventory module

This module helps check and control the inventory of ships and is also integrated with Procurement & Maintenance modules.

Specifically:

- Inventory Management for all assets, equipment, and supplies.
- Storage Location on Board and on Shore Locations.

Purchase module

This module will help you check and control every order, purchase and delivery for your ships and is also integrated with Inventory and Maintenance management modules.

Specifically:

- Requisitions and report deliveries system
- Requisition and order management, with updates from deliveries and invoices received
- Requisition budgetary status checks

our team

Ioannis Sarris

co-founder, head of products

Yannis has worked over 20 years in ship management, taking initiatives in organizational and digital transformation projects including the creation and deployment of a complete ERP solution with applications to the entire shipping organization. Yannis believes that shipping software must deliver practical solutions for ship management, and he is committed to Fleetwork becoming the shipping software solution for ship management.

Tasos Sarris

co-founder, head of development

Tasos has worked over 20 years in developing solutions for ship management. Tasos analytical approach to system thinking and practical hands on approach to solving problems has made it possible to design ERP systems for long established Shipping companies. Tasos has been passionate designing a solution that will help versatile teams grow their ship management activities.

why work with us

over 15 years of software experience in maritime applications & ERP systems. The first Cloud ERP by Greek company for the Greek shipping sector.

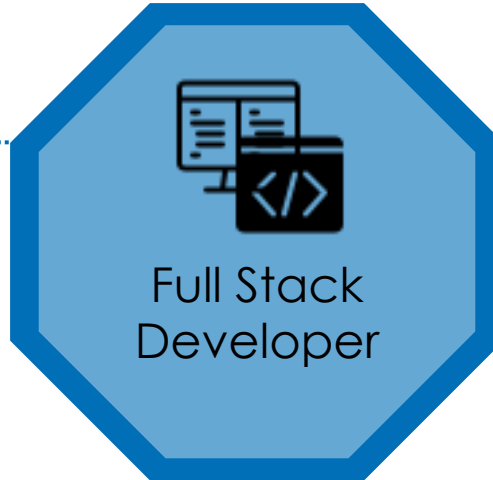

constantly seeking talented persons who will fit right-in our well structured team and add the “special something” that will help us all move another step forward in delivering the optimal ship management software.

job opportunities

KEY RESPONSIBILITIES

- Analyze requirements & offer viable solutions
- Produce efficient, clean & well-commented code
- Complete code/peer reviews prior to release
- Commit to gaining a thorough understanding of our core products for the development of new design features.

SKILLS

ESSENTIALS

.NET tech stack and more specifically working with
.NET6 & Blazor for back & front-end development
Razor, HTML & CSS, JavaScript

DESIRABLE

DevOps practices (Docker & Kubernetes, CI/CD
pipelines with SQL & MongoDB servers)
Design patterns & solid principles when developing
web application

DEVELOPMENT TOOLS

Microsoft Visual Studio | GitHub
